

AHD Camera Kit (nest box) 1080p / 3MP / 4mm lens

Before you start

Unpack your camera kit and familiarise yourself with all parts. Cables are not covered under warranty once they have been installed so it is advisable to set the camera up indoors, ensure you understand what goes where and everything is working correctly before you install it.

Deciding where to site the camera

This camera can be installed in a watertight nest box, bird aviary, hedgehog box, rabbit hutch, dog kennel or even up in the eaves of your house, the list of possibilities is endless. Note that you will only receive a colour video if there is enough daylight, we also advise that you test the camera in complete darkness to make sure the infrared range is suited to the application and positioning.

Once you have decided where to site the camera fix the separate U shape Camera Bracket with the two screws provided, and then slide the camera down into it. You can adjust the focus by loosening the tiny grub screw on the lens barrel, then gently turning the lens left or right. The camera angle can also be adjusted by swivelling the camera on its own bracket then gently tighten the screws on the sides of the camera to hold the position. Do not over tighten them.

This camera is NOT waterproof, so it needs to be sheltered from the weather. Always ensure cables are neatly positioned to reduce risk of tripping or harm to wildlife. As with any outside electrical equipment the use of a suitable RCD trip is recommended.

Connecting the Camera

To get the cable to your TV you will need to drill a 20mm hole through your wall, window frame or airbrick to carefully feed the cable into the house. Do not be tempted to trap it in a window closure. For further guidance please visit our website and go to the ADVICE page where you will find a short video.

AHD Camera Kit System Setup

gardenature
wildlife camera systems

1. Connect the male yellow (video) and white (audio) to the corresponding yellow & white on the AHD-HDMI Converter.
2. The short Splitter Cable has a female and 2x male ends, connect a male to the DC input of the AHD-HDMI converter. The other male on the Splitter goes into the black connector on the end of the long cable which runs to the camera.
3. Connect the female end of the Splitter cable to the short cable connector on the end of the mains 12v DC plug.
4. Plug an HDMI Cable (not included) into the AHD-HDMI Converter and the other end into a spare HDMI port on your TV/Monitor.
5. Plug in and switch on the mains plug for the AHD-HDMI Converter / Camera. Select 720 or 1080p
6. Select the HDMI Channel on your TV that you connected to, you will now see a live video feed from the camera.

Warranty/ Maintenance Guide

This kit has a limited 3-year camera warranty. For further information please see T&C's on the Gardenature website.

When not in use, it is recommended that your Gardenature camera is carefully stored away to help keep it in good condition. During cold weather use, we recommend you leave the camera power supply switched on 24/7.

Should you require any assistance please email or call us.
