

Bushnell® TRAIL CAMERAS

CORE™ DS Trail Camera

DUAL SENSOR TECHNOLOGY. THE DIFFERENCE THAT'S NIGHT AND DAY. Most trail cameras use only one image sensor to capture images 24 hours a day. So you settle for daytime images that are less sharp and rich, and nighttime images that lack consistent illumination and range. CORE DS Dual Sensor Technology gives you two image sensors—one optimized for more sharp and rich images during the day and another optimized for images with consistent and further illumination at night. So you can plot their movements more reliably and plan your hunts more strategically.

- Dual image sensors for high quality images day and night
- 100 ft night range
- 30 megapixels
- 0.2s trigger speed
- 3-Preset Menus + Advanced Mode
- In-Camera Color Review LCD (2 Models)
- 0.6s recovery rate
- 1080p 60fps video w audio
- 1-year battery life
- Removable Battery Tray
- Two-year limited warranty
