

Insect Hotel

- Due to the size and robust construction of this product we recommend that it be mounted securely, ideally in concrete.
- The two main support posts should go into the ground up to the depth of the black paint.
- The third post should be secured to the back of the Insect Hotel on the centre line, using the two coach screws provided.
- When mounting the third post use the small screw in the top hole and the large screw in the bottom hole
- For best results site facing south, south east or east.
- The Insect Hotel contains a combination of different micro-habitats designed to help a range of insects and other invertebrates, including solitary bees, ladybirds, beetles and beetle larvae, lacewings, and spiders.
